Implication #1: More People Move Out – Income is a Factor

- From 2011-13, an average of 60,000 people a year moved out of San Francisco. 63% of them were members of low or very-low income households.
- On average, 12.3% of low/very-low income people with a job moved out each year, while only 5.8% of higher income employed people moved out.
- Adjusting for other demographic factors, income appears to be a significant contributor to whether an individual has moved out of San Francisco this decade.

Outmigration Rates for Children and Young Adults are High in San Francisco

Percentage of Each Age Group Who Moved Out of San Francisco and California in the Past Year, 2012

Implication #2: Low Income Households Remaining in the City Spend Almost Half Their Income on Housing

- About 95,000 households in San Francisco's labor force make 80% of area median income or less.
- Although 75%-85% of the city's rental housing is subject to rent control, housing remains unaffordable.
- Low income households spend, on average, 46% of their income on housing. The HUD affordability target is 30%.
- The difference is over \$6,000 per year per household, or nearly \$600 million in total.

Conclusions: Two Economic Forces Shape San Francisco Today

- The first force is innovation – the Bay Area's innovation-driven economy continues to grow despite the highest cost of living of any large city in the country.
- The second force is housing supply – the Bay Area (as a whole) has under-built housing for at least the past 20 years.
- The City continues to face the two challenges of ensuring quality jobs are available for people at every skill level, and housing is affordable to every income level.
- During the current growth period, the City has seen job growth in almost every industry, and the unemployment rate is now very low. Maintaining balanced growth, and creating better job opportunities for residents, are the new challenges.
- Housing prices remain a major challenge, as the out-migration and high housing burden of low-income households indicates.
